

As a concerned citizen, supporter of our military and our aviation industry, and as an amateur radio operator, I would urge the commission to not move forward with Broadband over PowerLines (BPL). The potential for impact to the radio services of all of the above areas (military, aviation & amateur) is too great. I urge you to follow the lead of the Japanese, and limit broadband to methods known to not cause harmful interference.

Thank you  
Daniel Camp
